

Script

**Solving Economics and Finance problems
with MATLAB**

Peter H. Gruber

July 29, 2016

Contents

1 — Introduction	5
1.1. A problem that cannot be solved analytically	
1.2. Numerical methods in economics and finance	
1.3. About this course	
1.4. Prerequisites	
1.5. Using this script	
2 — A quick start to MATLAB	9
2.1. Getting started	
2.2. The main elements of the MATLAB language	
2.3. PC-Lab: An interactive introduction to MATLAB	
2.4. Getting help	
2.5. Useful web resources	
2.6. Exercises	
3 — Basic elements of the MATLAB language	20
3.1. Variables	
3.2. Arithmetic operators	
3.3. Programs	
3.4. Functions	
3.5. PC-Lab: The first program and the first function	
3.6. Exercises	
4 — More elements of the MATLAB language	37
4.1. Comparing, branching and looping	
4.2. Relational operators	
4.3. Flow control	
4.4. Two conditions: Logical operators	
4.5. For loops	
4.6. PC lab: Applications of for loops	
4.7. Exercises	
5 — Working with data	48
5.1. Introduction	
5.2. Organizing data	
5.3. Processing data	
5.4. Data sources	
5.5. PC lab: Importing data	
5.6. PC lab: Identifying US recessions	
5.7. Exercises	
6 — Linear algebra and its applications	59
6.1. Solving systems of linear equations	
6.2. PC-Lab: From equation to program – OLS step-by-step	
6.3. PC-Lab: The MATLAB Statistics Toolbox	
6.4. PC-Lab: applications of spectral theory	
6.5. Exercises	
7 — Simulation-based methods	66
7.1. The usefulness of random numbers	
7.2. Drawing from the empirical distribution	
7.3. Simulating random processes	
7.4. The Monte Carlo method	
7.5. PC-Lab: Simulation and estimation	
7.6. Exercises	
8 — Algorithms	85
8.1. Nonlinear functions	
8.2. Polynomials, approximation and interpolation	
8.3. Numerical algorithms	
8.4. Some examples for iterative algorithms	
8.5. Recursive functions	
8.6. PC lab: Traps in polynomial interpolation	
8.7. Exercises	
9 — Numeric differentiation and precision	102
9.1. Introduction and mathematical background	
9.2. The loss of precision theorem	

Contents

9.3. Tradeoff between numerical and analytical precision	9.4. Higher order algorithms
9.5. Numeric differentiation of data	9.6. PC-Lab: Higher order differentiation algorithms
9.7. Exercises	
10 — Optimization	111
10.1. Metrics	10.2. Canonical formulation of the optimization problem
10.3. Convex optimization	10.4. Nonconvex optimization
10.5. Stochastic optimization	10.6. Constrained optimization
10.7. PC lab: Fooling convex optimization	10.8. PC lab: Stochastic optimization
10.9. Exercises	
11 — Numeric integration and transform methods	127
11.1. The Riemann integral	11.2. Numeric integration
11.3. Numeric integration of data	11.4. Transform methods
11.5. The FFT method for option pricing	11.6. PC Lab: Comparing FFT and COS methods
11.7. Exercises	
12 — How to write a successful program	142
12.1. Introduction	12.2. Elements of good programming style
12.3. Finding code and quoting it	12.4. Incomplete list of frequent MATLAB errors
12.5. Dos and don'ts in MATLAB	12.6. PC lab: How good style prevents errors
12.7. Exercises	
13 — Improving a program	151
13.1. Debugging	13.2. Increasing a program's efficiency
13.3. Dealing with complexity	13.4. Shortening a program
13.5. Exercises	
14 — Parallel computing	160
14.1. Introduction and concepts	14.2. Implementations of data parallel tasks in MATLAB
14.3. Exercises	
15 — MATLAB and databases	163
15.1. Introduction	15.2. Setting up a database system
15.3. Connecting MATLAB to the database	
A — A recap of matrix algebra	167
A.1. Matrices, vectors and scalars	A.2. Special matrices
A.3. Matrix calculation rules	A.4. Frequently used tricks with vectors
A.5. Spectral theory	A.6. Applications of spectral theory
B — A recap of complex algebra	180
B.1. Exercises	
C — An OLS refresher	182
D — Practical issues	184
D.1. MATLAB symbols	D.2. MATLAB graphics
D.3. MATLAB table output	D.4. From MATLAB to \LaTeX — creating a research workflow
D.5. Practitioner's tips	D.6. An introduction to the Symbolic Mathematics Toolbox
E — MATLAB @ UNI	196
E.1. Guide to the exercises	E.2. Obtaining and installing MATLAB and its open-source alternatives
